Código do Estilo hacksxexeo v4.3.2

Geraldo Xexéo

Thursday 27th May, 2021 - 16:01

1 Introduction

This package support different forms of comments and editorial marks. It picks ideas from different packages, such as `ed`, `color-edits`, `todonotes`, and others. It was written to support my way of working, and received suggestions from my students. The main goal was to build only a front-end to other packages, but with time, it grow in scope.

As it is my first package, TEXand LATEXprogramming is sometimes naive. I aimed at building it over other packages, but due to the fact that many packages in this subject clash, I rewrote some code. Also, although aiming at minial interference with other packages, some decisions had to be made.

I had to thank Eduardo Mangeli, that did some previous code.

2 Usage

Este pacote usa outro pacote que transforma o comportamento padrão do sumário e das listas no LATEX, que deixam de pular a página automaticamente. Não há por enquanto solução para esse problema, a não ser o óbvio: usar o comando `\newpage` antes dos comandos `\tableofcontents`, etc.

Se você usar o pacote `hyperref`, as listas podem ser clicadas para atingir o local do comentário.

2.1 Informing user about versions

It is possible that the user wants to know the version being used. We provide two commands for it.

`\hacksxexeoversion` Provides the current version

`\printhacksxexeoversion` Provides name and version

2.2 Draft environment

`rascunho` The draft environment aims to allow writers to include text that is marked somehow as a draft. This environment is evolving, looking for a good way to signal the draft status, due to the different interactions with the packages it uses and user's

packages. It has one optional parameter that names the draft. Its default value is "Rascunho" Ir the `rascunho` option is not enabled, the text inside the title and the text inside the environment will not appear. The user should remember that some options will automatically turn on the `rascunho` option, such as the option `edicao`.

```
\begin{rascunho}[A draft title]
This is the example of a draft.
The title must be highlighted
There must be a box around it.
\end{rascunho}

\begin{rascunho}
This draft has the default title.
\end{rascunho}
```

A draft title
This is the example of a draft.
The title must be highlighted
There must be a box around it.

Draft
This draft has the default title.

3 Warnings

This package uses another package that changes LaTeX's standard behavior for summary and lists. When you use it, you must explicitly change pages with `\newpage` before `\tableofcontents` or similar commands.

4 Implementation

4.1 Access to the current version

We provide some macros for the user to know the version being used.

`\hacksxexeoversion` Provides current version of hacksxexeo

```
\newcommand{\hacksxexeoversion}{\hx@version}%
```

`\printhacksxexeoversion` Provides package name and version

```
\newcommand{\printhacksxexeoversion}{hacksxexeo v. \hacksxexeoversion}%
```

4.2 Option Processing

```

```

5.1 Required Packages

Packages that are always required

```
\RequirePackage{xcolor}
\RequirePackage{soulutf8}
\RequirePackage[normalem]{ulem}
%para os comentários e a lista
\RequirePackage{tocloft}
\RequirePackage{etoolbox}
\RequirePackage{environ}
\RequirePackage{xstring}
\RequirePackage{csquotes}
\RequirePackage{mdframed}
%%%%%%%%%%%%%%%%%%%%%%%%
%%%%%%%%%%%%%%%%%%%%%%%%
```

6 Optional Packages

Package that are required only sometimes

```
\ifshowednotes
%%\RequirePackage{paralist}
\ifmarginnote\RequirePackage{marginnote}\fi
\else
```

```
\RequirePackage{verbatim}
\fi%
```

Checking if babel is loaded, use iflang

```
\@ifpackageloaded{babel}%
{%  \message{Babel Loaded!}%
    \RequirePackage{iflang}%
}{%
    \message{Babel not detected!}%
}%
% |hyperref| must always be the last
\ifednotebookmarks\RequirePackage{hyperref}\fi
```

6.1 I18N Using Babel

We can detect if babel is enable and allow for some languages. If you want to use another language, just use `\setlocalecaption` to set the correct value.

`\hxdrafttitle`

```
\@ifpackageloaded{babel}%
{%
    \IfLanguageName{brazilian}{\def\hxdrafttitle{Rascunho}}{}
    \IfLanguageName{portuguese}{\def\hxdrafttitle{Rascunho}}{}
    \IfLanguageName{english}{\def\hxdrafttitle{Draft}}{}
    \message{Babel detected!}
}{%
    \def\hxdrafttitle{This~is~a~Draft}%
    \message{No Babel!}
}%
```

6.2 ed inspired code

This code, inspired in the `ed` package, makes the basic mechanism for inserting comments as footnotes with an observation in the margin. As an adition to `ed`, it support colors.

```
\newcommand\ednoteshape{\sffamily}
\newcounter{ednote}
\def\hx@currentcolor{black}
```

a mágica é aqui footnote indicador e rótulo

`\ed@foot` This macro creates a footnote. It uses counter `ednote` in arabic. It prints the footnote using the currently defined color (That is a global variable, setted up elsewehre. This is not good programming practice, but it turned out to be the easiest way of doing it in LaTeXwithout more and more arguments.)

```
\newcommand\ed@foot[3]% text, type, label
{\def\@test{#3}\footnotetext[\arabic{ednote}]%
{{\scshape{\textcolor{\hx@currentcolor}{#2}}\if\@test\@empty\else\label{ed:#3}\textcolor{\hx@cu
```

```
\def\ed@mark@style#1{#1}%
\newcommand\ed@mark[1]{\ed@mark@style{\footnotemark[#1]}}%
\newcommand\ed@footnote[3]{\ed@mark{\arabic{ednote}}\ed@foot{#1}{#2}{#3}}%
%% a outra mágica é aqui
\newcommand\ed@margin[1]{\ifmargins\ifmarginnote\marginnote{\textcolor{\hx@currentcolor}{#1}}\e
%%
\newcommand\Ed@note[3]% text, type, label
{\addtocounter{ednote}{1}\message{#2!}%
    \ifshowednotes\ed@footnote{#1}{#2}{#3}\ifednotebookmarks\belowpdfbookmark{#2: #1}{#2.\theed
\newcommand\ed@note[4]% text, type, label, margin
{\Ed@note{#1}{#2}{#3}\ifshowednotes\ed@margin{#4:\arabic{ednote}}\fi}%
\newcommand\ednote@label{EdNote}%
\newcommand\ednote@margin{EdN}%
\newcommand\ednotelabel[1]{\def\ednote@label{#1}}%
\newcommand\ednotemargin[1]{\def\ednote@margin{#1}}%
\newcommand{\Ednote}[2][]{\Ed@note{#2}\ednote@label{#1}}%
\newcommand{\ednote}[3][]{\def\hx@currentcolor{#3}%
\ed@note{#2}\ednote@label{#1}\ednote@margin}%

`rascunho` This macro creates a boxed text, with title used as a first parameter It uses package `mdframed` to create the frame. If rascunho is turned off as an option, it supress everything inside the body. Due to problems with soul accepting `\hxdrafttitle` we use `\colorbox` to support multiple languages if default title is used
