## O Estilo hacksxexeo v 3.6

## Geraldo Xexéo

1 de maio de 2021 - 13:14

## 1 Introdução

Este é o pacote em evolução para fazer a edição de artigos dissertações e teses orientadas por Geraldo Xexéo. Apesar de ser uma expansão de parte da funcionalidade do pacote ed, ele é mais similar em funcionalidade ao pacote color-edits, mas só descobri isso muito tarde. Porém, ainda permite que algumas peculiaridades de minha parte sejam desenvolvidas.

O objetivo inicial era ser um front-end para vários comandos disponibilizados por outros pacotes, de forma que eu possa mudar os pacotes que uso e manter como os comentários são feitos, e usar os nomes que quisesse, porém com o uso demandas específicas foram aparecendo e sendo implementadas.

O pacote foi iniciado com código de Eduardo Mangeli. A funcionalidade do pacote ed deu as inspirações. Algum código desse pacote foi copiado aqui e está marcado. Posteriormente descobri o pacote color-edits, que forneceria, sem algumas idiossincrazias minhas, quase tudo que necessitava, mas nada do código dele foi usado.

A retro-compatibilidade do pacote com si mesmo é essencial.

## 2 Atenção

Este pacote usa outro pacote que transforma o comportamento padrão do sumário e das listas no LATEX, que deixam de pular a página automaticamente. Não há por enquanto solução para esse problema, a não ser o óbvio: usar o comando \newpage antes dos comandos \tableofcontents, etc.

Se você usar o pacote hyperref, as listas podem ser clicadas para atingir o local do comentário.
